

# TC Economy White Eggcrate

CI/SfB reference

63  
January 2010

The **TC Economy Eggcrate Louvre** is designed to give maximum lighting output through the 15 x 15 x 8mm cell configuration. This louvre is injection moulded on the most modern computer controlled system and each individual louvre is coated with an anti-static fluid to prevent the airborne dirt and dust from sticking to the cell walls during installation. The standard TC polystyrene and acrylic louvres are manufactured with a solid white finish. Other colours are available subject to colour and quantities.

TC Economy Louvres are suitable for many applications. Each louvre is moulded with overlapping ends (as in Photo). This enables the louvre to be installed in continuous run lighting systems with the cells lining up.

TC Louvres are moulded in a range of panel sizes. Panels can also be cut to customers individual requirements.
