U88 Opalised LED System

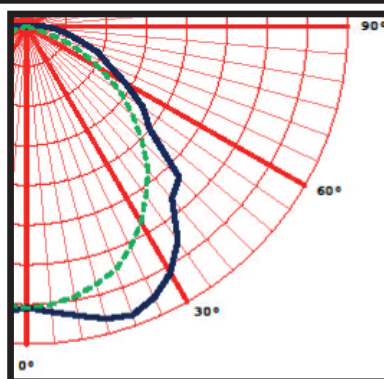

U88 opalised LED systems is SLP (UK) LTD latest development in linear control systems. U88 is designed to improve the high brightness of discreet LED's to provide a comfortable visual environment. The two profiles (wide & narrow) give users the option for different light spread.

The wide profile produces a wider spread of light covering more surface area, whilst the narrow profile provides a more concentrated light output. The two profiles provide users the choice of light output, to tackle any type of application. U88 profiles are TP(a) rated and are manufactured in large linear strips, and can be cut to any requirements. For further information contact SLP (UK) LTD or visit our website.
