13 x 13 x 13 mm standard panel size 595 x 595 mm

Colours and Composition

Aluminium Eggcrate Louvres are constructed from precision stamped strips of flat aluminium that are subsequently slotted together and pressed to form a “cold weld” joint in the corners of each full cell. This construction method results in a flat, rigid sheet that is suited to many applications. The panels are available in various finishes and any BS or RAL colour (subject to quantity). In addition the panels can be anodised or post painted (painted after assembly) for use in external or areas of high humidity.

Appearance

The Aluminium Eggcrate Louvres are mainly based on a square cell construction that offers a clean and attractive visual appearance. Within our range we offer a number of decorative type panels that offer various more textured finishes for complete ceiling systems or just feature areas in public buildings, hotels, department stores etc.

Cutting

Aluminium Eggcrate Louvres can be cut or manufactured to the customer’s specific size request. louvres are cut to size using specialist circular saw or band saw equipment. A symmetrical (balanced) cutting service can be provided upon request. For further information review our specialist services data sheet for louvres.

Handling and Maintenance

Health and safety issues must be assessed at all times. When handling panels, clean, dry protective gloves should be worn. Aluminium louvres can be cleaned by light dusting or by washing in warm soapy water and blowing dry with a clean, oil free air line.
